YOUR CREATIVE STRATEGY PROFILE

B

LEVEL 3 OF 4

The Practitioner.

You've got the chops. Research, briefs, data, you do all of it. But you reinvent the wheel every time, and your wins vanish into thin air.

WRITER STUDENT PRACTITIONER STRATEGIST

SCORE BREAKDOWN

01

Here's how you did.

We broke your answers down across the 5 skills that matter most in creative strategy. Some are solid. Some need work.

Research	3/4
Data Analysis	3/4
Creative Briefing	2/4
Hypothesis Thinking	3/4
Iteration	2/4

0	2	3
SKILLS TO BUILD	EMERGING	UNLOCKED

WHERE YOU ARE

02

You can do the work. You just can't bottle it.

Look, your answers were good. You knew where to pull research. You diagnosed before you prescribed. You got the difference between hook fatigue and angle fatigue. That's more than most people who put "creative strategist" in their bio. But you were sharp on some questions and jumped straight to tactics on others. The signal was inconsistent.

HERE'S THE GAP

You've got the skill. What's missing is a system around it. A system means your research runs through the same framework every time. Your briefs follow the same bones. Right now, the quality of your work depends on how you're feeling that morning. A system takes your mood out of the equation.

Where things get shaky

- Your research is solid, but you start from zero every time
- Your briefs are good, and different every single time
- When something wins, you don't write down why
- There's no testing playbook you carry from client to client
- Every new project feels like day one

WHAT THIS MEANS

03

Talent without a system hits a wall.

You've got the raw ability. But without something repeatable underneath it, every project starts fresh. Your best work stays trapped in the moment it happened, it never builds on itself.

WHERE YOU ARE NOW	WHERE YOU'RE HEADED
Research that looks different every time	**One research framework you run on every project**
Briefs that are good but never the same format	**A brief template that keeps the quality locked in**
Wins that disappear the second the project wraps	**A playbook that captures every win and why it worked**
Output that depends on how your day is going	**A system that delivers even when you're off**
Explaining what you do a different way each time	**Naming your process in two minutes flat**

The gap is not skill. You have the skill. The gap is that everything lives in your head. On a good day, you're great. On a bad day, you wing it. A system means your worst day still produces solid work.

The 5 skills that actually matter.

These are the things that separate someone who does the work from someone who owns a system. Here's where you're strong and where things break down.

Unlocked

1. Research

You go to the right places. Amazon reviews, Reddit threads, Ad Library. You dig for real customer language. The work is strong. It's just different every time you do it.

Unlocked

2. Data Analysis

You can look at the numbers and figure out what went wrong. You see the story in the data. But you're doing it off instinct, not a repeatable read.

Emerging

3. Creative Briefing

There's real insight in your briefs. But the structure changes every time, and when the structure shifts, the quality shifts with it.

Unlocked

4. Hypothesis Thinking

You think in testable bets, which is rare. But you don't always write them down, and you don't always build the next test off the last one.

Emerging

5. Iteration

You know when to keep going and when to kill something. But without a debrief habit, what you learn on one project never makes it to the next.

LEVEL UP

05

How to reach The Strategist.

Going from Practitioner to Strategist comes down to one thing: wrapping a system around what you already know. You don't need to learn more. You need to make what you know repeatable.

PROGRESS TO NEXT LEVEL

The Strategist (A-)

2 skills to go

The Practitioner (B) — The Strategist (A-)

01

Build a research template

One doc, three sections: voice of customer (love/hate/fear), competitor teardown (hooks/angles/formats), audience patterns. Use it on three projects. Tweak it after each one.

+ Makes research repeatable

02

Start a debrief habit

After every win, write one page: what you guessed, what worked, who it worked on, what you'd try next. Do ten of these and you'll have a playbook nobody else has.

+ Makes wins compound

03

Lock in your brief format

Pick a structure: customer insight, hypothesis, hook direction, test variable. Use that same skeleton every time. The content changes. The container doesn't.

+ Makes quality consistent

WHAT'S NEXT

06

So you took the quiz. And you're still reading.

That tells me something. You scored well. You've got the skill. And you're the kind of person who doesn't just glance at a result and move on you want to know what to do with it.

Tomorrow, you'll get the first of a daily email from me. Each one picks up where this report left off one idea, one tool, one shift that helps you build the system around what you already know how to do.

- **Week 1:** Turning your research process into something you can run in 30 minutes, not reinvent every time
- **Week 2:** Building a debrief habit so your wins stop disappearing after the project ends
- **Week 3:** Locking in a brief format so your output stops riding on whether you had coffee
- **Week 4:** Naming your process so you can talk about it, teach it, and own it

ONE THING BEFORE YOU GO

Reply to tomorrow's email with the word PRACTITIONER and tell me: what's the one thing you wish you had a system for? Research? Briefs? Testing? Something else? I read every reply.
